

SUSTAINABLE FUTURE—THINK GREEN

CREATING A SUSTAINABLE FUTURE

There is “The Perfect Storm” of environmental, economic, and political disaster looming at the edge of all of our plans. If the full impact of global warming, fundamentalist terrorism, oil addiction, massive inequalities of wealth, worldwide financial schemes, and budget and trade deficits all break at the same time, our communities must be prepared to react. This three-hour seminar reviews what we can do to weather the storm and how to create a career that helps forge a better world on the other side of the challenges. These are world wide problems, but the solutions are local and personal. Discussion includes:

- An update to the inconvenient truth
- Producing renewable energy in the Midwest
- Manufacturing renewable energy equipment
- Regional food production
- Clean and safe water
- Decision-making with systems analysis

Please join us at this free seminar to share your thoughts and ideas on such important issues taking center stage in our world today. Please call (708) 709-3750 to register.

HELPING TEACHERS INSTRUCT HIGH SCHOOL STUDENTS ON HOW TO CREATE A SUSTAINABLE FUTURE AND CAREER

This seminar covers much of the same subject matter discussed in the “Creating a Sustainable Future” seminar. All teachers and administrators from the elementary schools, junior high and high schools, community colleges, and universities are invited to take part in this seminar to help ensure there will be a sustainable future for the generations to follow. It is very important to educate and inform our students about the growing concerns we have about our environment and natural resources. We need to let our students know that new career paths have been developed due to these issues facing the world today. Please call (708) 709-3750 to register.
